

# TRACHEOSTOMY MASK CONNECTOR

Optimising the Efficacy of Nebulisation (PATENT PENDING)

Tracheostomy Mask Connector ensures optimisation in medication delivery when nebulization is performed on tracheostomy patients who are unable to sit upright unassisted. The product **enhances the efficacy of medication delivery** to patients and thereby reduces the potential risks of life-threatening episodes that result from blockage of airways due to thick mucus and phlegm.

TRACHEOSTOMY MASK CONNECTOR **keeps the nebulization chamber in an optimum position** for patients who are not able to sit upright unassisted.
